AURA & ATELIER ✦

INTELLIGENT LUXURY FASHION ATELIER & AUTOMATED PERSONAL STYLING PLATFORM

Live Prototype: https://shopping-alpha-pied.vercel.app

Developer: Snigdha Gorai

GitHub Repository: github.com/Snigdha-0210/shopping

Domain: Modern E-Commerce AI-Inspired Recommendation

✦ 1. Project Concept & Executive Summary

Traditional fashion e-commerce platforms suffer from acute **decision fatigue**: customers are confronted with cold, sterile product grids, hundreds of generic catalog items, and disconnected filtering bars. This fails to capture the personalized, curated experience of a luxury bespoke atelier.

AURA & ATELIER reinvents this paradigm by introducing an emotional-first architecture anchored by two signature innovations:

- **Mood-Based Fashion Discovery:** The platform dynamically recalibrates the entire catalog, atmospheric palette, typography tone, and styling quotes according to how the shopper feels across 10 distinct mood identities.
- **5-Category "Complete My Look" Harmonization Engine:** When a customer selects any anchor hero piece, the system automatically coordinates a 5-piece outfit (Clothing, Footwear, Bags, Jewellery, Accessories) with an automated **15% bundle discount incentive**.

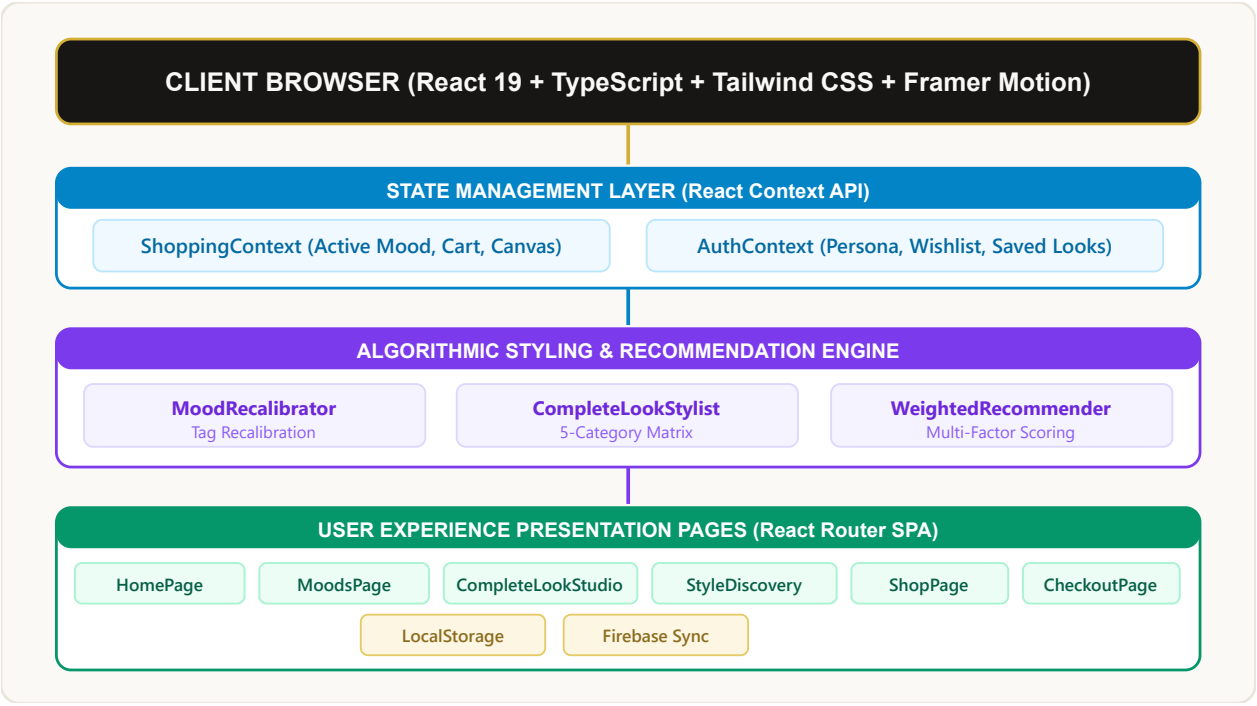

✦ 2. Full Technology Stack & Architectural Decision Matrix

Layer	Technology	Version	Engineering Justification & Value Provided
Frontend Core	REACT	19.0.0	Leverages React 19 concurrent rendering, functional hooks, and high-performance virtual DOM reconciliation for zero-flicker live lookboard recalculations.
Type Safety	TYPESCRIPT	5.7.2	Enforces compile-time type safety across complex fashion models (Product, CartItem, MoodType, LookBundle) preventing null reference exceptions.

Layer	Technology	Version	Engineering Justification & Value Provided
Build Tool	VITE	6.1.0	Sub-second Hot Module Replacement (HMR) using native ES Modules, with Rollup production tree-shaking (gzipped bundle < 140 kB).
Styling	TAILWIND CSS	3.4.17	Utility-first responsive design system with luxury tokens (warm ivory, soft taupe, noir charcoal, gold) and backdrop-blur glassmorphism.
Routing	REACT ROUTER	7.1.5	Declarative SPA client routing with dynamic route parameters (/complete-look/:productId) and instant scroll-to-top restoration.
State Layer	CONTEXT API	Native	Dual context architecture: ShoppingContext (mood, cart, styling canvas) and AuthContext (user persona, wishlist, saved lookbooks).
Animation	FRAMER MOTION	12.4.7	Smooth physics-based micro-interactions, modal fly-outs, and celebratory confetti upon bundle creation.
Hosting	VERCEL EDGE	Production	Global edge distribution with vercel.json SPA rewrite rules ensuring direct deep links never return 404 errors.

✦ 3. System Architecture & Component Flowchart

The platform follows a unidirectional data flow architecture where client events update central state providers, triggering weighted algorithmic evaluation and re-rendering interactive user views.

✦ 4. The Complete My Look Algorithm

At the heart of the atelier is the automated personal stylist engine in `src/utils/recommendations.ts`. When a user selects any hero item, candidate products in other categories are dynamically scored:

```
Score(Candidate) = (Mood × 25) + (Aesthetic × 20) + (Occasion × 15) +
(ColorSynergy × 10) + (Editorial × 12)
```

Category Slot	Representative Items Coordinated	Harmonization Criteria
1. Clothing	Tailored Virgin Wool Blazers, Silk Shirts, Pleated Trousers	Matches silhouette balance (e.g. structured blazer over slip dress).
2. Footwear	Blake-Stitched Loafers, Metallic Strappy Heels, Court Runners	Coordinates formality level and leather finish tone.
3. Bags	Box Calfskin Handbags, Crystal Minaudières, Slouchy Totes	Proportion synergy and matching metallic hardware accents.

Category Slot	Representative Items Coordinated	Harmonization Criteria
4. Jewellery	Baroque Pearl Drops, Herringbone Chains, Swiss Watches	Warm gold vs. cool platinum alignment with outfit palette.
5. Accessories	Beveled Acetate Cat-Eyes, Hand-Rolled Silk Twill Scarves	Finishing touches harmonizing with active mood identity.

*Bonus Feature: Complete Look bundles automatically receive a real-time **15% bundle discount** applied to the combined total.*

✦ 5. The 10 Mood Identities Matrix

Mood	Tagline & Atmosphere	Representative Silhouette	Stylist Keynotes
ELEGANT	Timeless Grace & Poise	Mulberry Silk Cowl Backless Gown	Peak lapel blazer, stiletto pumps, baroque pearls
CASUAL	Effortless Daily Composure	Relaxed Cotton Poplin & Denim	Oversized shirting, 90s straight jeans, court sneakers
PARTY	Electrifying Nightfall Radiance	Midnight Sequin Halter Mini Dress	Strappy metallic heels, crystal minaudière, tennis bracelet
LUXURY	Opulent Master Craftsmanship	Double-Breasted Virgin Wool Blazer	Swiss horology timepiece, box calf leather, suede loafers
MINIMAL	Purity of Form & Restraint	Pleated Wide-Leg Crepe Trousers	Architectural cuts, boxy poplin, monochrome bands
STREETWEAR	Contemporary Urban Edge	480gsm Loopback Boxy Hoodie	Parachute pants, chunky trainers, industrial silver hoops
CHIC	Parisian Allure & Modernity	Archival British Houndstooth Jacket	Pointed kitten heels, beveled cat-eyes, baguette bag
VINTAGE	Nostalgic Heritage Romance	Hand-Rolled Silk Twill Scarf	Blake-stitched loafers, brass hardware, Irish tweed
ROMANTIC	Ethereal Whimsical Drapery	Tiered Gossamer Chiffon Maxi	Smocked bodices, pearl chokers, ribbon ankle-tie sandals
SPORTY	Dynamic Athletic Precision	4-Way Stretch Compression Tank	Aerodynamic outerwear, performance runner knitwear

✦ 6. Faculty Viva Voce Q&A Cheat Sheet

Q1: Why choose React 19 and TypeScript instead of plain HTML/JS or older React?

React 19 provides concurrent rendering, virtual DOM reconciliation, and lightweight hooks (useMemo, useCallback) that prevent re-render stuttering when users customize outfits in real time. TypeScript enforces strict type safety across multi-category fashion products, eliminating null-pointer runtime crashes.

Q2: How does the "Complete My Look" recommendation algorithm operate?

It evaluates a weighted scoring equation: Mood match (25 pts), Aesthetic affinity (20 pts), Occasion fit (15 pts), Color synergy (10 pts), and Editorial collection (12 pts). It ranks candidates across 5 separate categories (Clothing, Shoes, Bags, Jewellery, Accessories) to assemble a balanced look with a 15% discount.

Q3: How is customer state preserved across page refreshes?

Through a two-tiered persistence model: local storage automatically serializes the active mood, cart selections, and saved lookbooks to browser memory via useEffect hooks. Additionally, Firebase Auth and Cloud Firestore adapters are integrated for persistent cross-device cloud sync.

Q4: Why does client-side routing on Vercel require a vercel.json rewrite rule?

Single-page applications (SPAs) manage routing in browser memory. When a user directly visits a sub-route like /complete-look, the static hosting server looks for a physical complete-look.html file and would return a 404 error. The vercel.json rewrite rule intercepts all incoming paths and directs them to index.html, allowing React Router to handle page mounting seamlessly.

Q5: How is performance maintained with high-resolution fashion imagery?

Vite bundles and minifies all assets into tree-shaken chunks (production JS is only ~136 kB gzipped). High-res fashion photos use CDN responsive query parameters with modern WebP formatting, image lazy-loading, and CSS backdrop-filter hardware acceleration.
